

DANNY GALVIS

Elizabeth, NJ • 908-808-1400 • dannygalvis1000@outlook.com • linkedin.com/in/dannygalvis

Cybersecurity analyst with hands-on SOC, incident response, and vulnerability management experience. Skilled in alert triage, phishing containment, IAM administration, and building custom security tooling. Seeking full-time roles.

EXPERIENCE

Kean University Office of Information Technology

Network & Telecommunications Technician

Union, NJ

Sep 2026 – Present

- Support the university's network and telecommunications infrastructure, troubleshooting connectivity issues across wired and wireless network segments
- Manage phone numbers and extensions on the campus telecom system, and assist with core network equipment (switches, wiring, access points)

EisnerAmper

Cybersecurity Analyst Intern

Avenel, NJ

May 2026 – Sep 2026

- Triage and investigate escalated security alerts using ReliaQuest GreyMatter, verifying suspicious activity and documenting findings before escalating or closing
- Assisted in containing confirmed phishing and ransomware compromises using Microsoft Defender, Google SecOps, Proofpoint, and Zscaler, limiting unauthorized access
- Assisted in creating GreyMatter workflows to streamline triage of common alert types, improving consistency and response time across the security team
- Perform vulnerability management using Tenable across 200+ servers, and monitor external domain security posture using UpGuard to reduce exposure

Kean University Office of Information Technology

Help Desk Technician

Union, NJ

Dec 2024 – May 2026

- Administered Okta and Active Directory access for 19,000+ user accounts, enforcing least privilege and validating identity for secure authentication
- Triaged suspicious logins and account anomalies, escalating confirmed IOCs with a 1–2 day average resolution time
- Resolved 50+ weekly user issues across accounts, endpoints, and network connectivity while maintaining security compliance

National Cyber Center of Excellence – Kean University

Student Research Assistant

Union, NJ

Dec 2024 – Apr 2025

- Conducted OSINT research to identify and analyze unreported cyberattacks on nonprofit organizations not yet documented elsewhere, mapping findings to MITRE ATT&CK and cataloging IOCs in the Non-Profit Cyber Incident Repository (NPCIR)
- Collaborated with Dr. Mierzwa and the NCCE team to build a hands-on instructional lab (Kali Linux, VMs, vulnerable Windows systems) teaching network security, attack, and defense to a STEM pre-college program, Summer 2025

PROJECTS

Signal Trace – Distributed Honeypot Threat-Intel Platform

Python, SQLite, Cowrie, Azure, Terraform, Server-Sent Events • 2026 • <https://github.com/dannyg26/signal-trace>

- Deployed a real Cowrie SSH/Telnet honeypot on Azure with a self-built Python/SQLite detection platform that fired 21,205 brute-force, 845 credential-spray, and 202 genuine malware-transfer alerts against real, unsolicited attacker traffic, nothing seeded or simulated
- Investigated two incidents end-to-end: a 152-session credential-stuffing burst across 78 usernames, and a botnet downloader staged via an embedded SSH key that recurred 5 times over 5 days, producing full case files, IOCs, and a MITRE ATT&CK-mapped incident casebook

Detection-as-Code Pipeline – Sigma, MITRE ATT&CK & CI/CD

Sigma, Microsoft Sentinel/Defender (KQL), GitHub Actions, MITRE ATT&CK • 2026 • <https://github.com/dannyg26/detection-as-code>

- Built a Sigma-to-KQL detection pipeline (3 MITRE ATT&CK-mapped rules, dual-converted to Microsoft Sentinel and Defender for Endpoint KQL) that achieved a 100% detection rate with 0 false positives against real Sysmon telemetry captured via Atomic Red Team, enforced by a GitHub Actions CI gate on every commit.
- Deployed all three rules unmodified to a real Microsoft Sentinel workspace, where they fired real Scheduled Analytics Rule incidents against ingested telemetry, confirming the generated KQL works in a live SIEM, not just in local validation.

Cloud Detection & Incident Response Lab

AWS, Splunk, GuardDuty, CloudTrail, IAM • Aug 2026 • <https://github.com/dannyg26/aws-cloud-detection-ir-lab>

- Built an AWS cloud detection lab integrating CloudTrail, VPC Flow Logs, GuardDuty, Security Hub, and Splunk for centralized monitoring and investigation
- Simulated compromised IAM credentials, cloud reconnaissance, privilege-escalation attempts, and S3 data exfiltration, developing SPL detections and correlation searches to identify malicious behavior
- Compared native GuardDuty coverage against 6 custom SPL detections and found GuardDuty missed the low-volume reconnaissance-to-IAM-escalation chain that Splunk's multi-stage correlation caught; documented all 3 attack scenarios as full case files on a custom analyst dashboard

LEADERSHIP & AWARDS

NextGen Cyber Association at Kean University – President

dannyg26.github.io/nextgen-cyber

Union, NJ

Sep 2024 – Present

- Founded and grew the organization from 0 to 70+ members, running technical workshops and career-readiness sessions
- Plan and lead a semester-long event series covering network traffic analysis, technical interview prep, and beginner web exploitation, plus general body meetings and CTFs
- Co-hosted an inter-university CTF with 70+ participants and sponsors including the NY Giants, Oracle, and JERSEYSTEM

Awards: 1st Place - GMIS CAHSI Advanced CTF (JHU APL-sponsored), 2026 | 1st Place - KeanUHackThis, 2025 | Kean IT Customer Service Recognition, 2025

EDUCATION

Kean University: B.S. Computer Science, Concentration in Cybersecurity • GPA: 3.7/4.0

Expected Dec 2026

CERTIFICATIONS

CompTIA Security+ (SY0-701), Dec 2025 • Google Cybersecurity Certificate, 2024

SKILLS

Security: Google SecOps, Microsoft Defender, ReliaQuest GreyMatter, Proofpoint, Zscaler, Tenable, UpGuard, Active Directory, Okta, Kali Linux, Wireshark, AWS, GuardDuty, CloudTrail, Splunk

Technical: Python, Java, SQL, PowerShell, JavaScript/TypeScript, Git

Methods: Incident triage, phishing investigation, IOC analysis, threat hunting, threat intelligence research, vulnerability management, OSINT
